- LeanScale: under control for separating scaling videoplayer from scaling car models.
- Try to clean all bugs that get noticed:
 - adjust the video plain size/ratio to display video properly
 - next clip button resulted crashes
 - volume slider and video slider works perfectly just as videoplayer section user interaction GUI design and implementation are perfect right now ~!
 - Car selection section removed left over car models when user interacts other sections.
 - news selection section added possiblity to surfe and view original news, as well as some button kept display new texts.
 - Will make at least another commit to summarize: include android phone screen recorded videos, and NewsAPI small part video to fetch news form online.
- All major functionalities are finished. One screen shot was attached.

- Will continuously smooth the project a little bit more (maybe a couple of days) to see if there is anything else that I can do for it.

- video play part user interaction are completely finished. Will fill in the rest necessary components for news selection section to complete.
- Play Pause function works, interface needs to be improved.
- will make video user interaction work first, then modify others.
 - video works only without user interaction (play, pause)
 - car selection section works
 - news selection basically works, hard coded five news, display in a new plain
 - Others: news API call works, NewsAPI client library works
